## Sony Announces the Anycast Station

Making its debut at SMPTE 2005 was Sony's AWS-G500 Anycast Station. This is a powerful and portable solution for live events. It combines a six channel video switcher, a six channel audio mixer and a LCD monitor, all in one compact laptop style unit. The unit provides the ability to mix between PC content, such as presentation material and video sources. The station also includes web streaming functionality, allowing local and remote audiences to enjoy the same event. The Anycast station can ingest diverse media of varying resolutions and formats, and has RGB, projector and PC outputs. At SMPTE Sony were also displaying a very new prototype of a silver coloured new HD XDCAM! For more information please call Sony on 02 9878 9769.

## Miller Launch New Solo DV Alloy Tripod

Miller introduces the new Solo DV alloy tripod to bridge the support gap for DV users. The tripod boasts silky-smooth Miller fluid pan & tilt heads with a solid spreaderless alloy tripod design. The new Solo DV alloy tripod also utilizes flick-of-a-switch selectable counterbalance, 75mm ball leveling and a quick release camera plate. Great for one man bands. The Solo Alloy is an alternative to the Solo DV Carbon for the more price conscious customer. The tripod features two stage telescopic design, leg angle locks for quick set up at varying heights, weighs less than 10lb (5kg). It sets up to 63" (160cm) height in seconds and packs down to a compact 27" (70cm) for transport. For more information please call Miller on 02 9439 6377.
